What is Padmi

Camera system + AI that analyses matches = App with stats and highlights

Padmi is a **camera system with artificial intelligence** that automatically analyses padel matches, without the player having to do anything more than download the app. While you play, it collects information about what happens on the court and processes it in real time.

When the match is over, all that analysis is gathered in an app where players can see their stats and better understand how they played, in a clear and simple way.

How Padmi works

1.

Download the app

From any app store. With the QR codes on the club's posters, it's really easy.

2.

Start the match

Select the club name, the court, the time and the match duration.

3.

Play!

You don't need to worry about a thing here: the cameras do it all.

All you have to do is create and save your best highlights!

4.

Get your stats

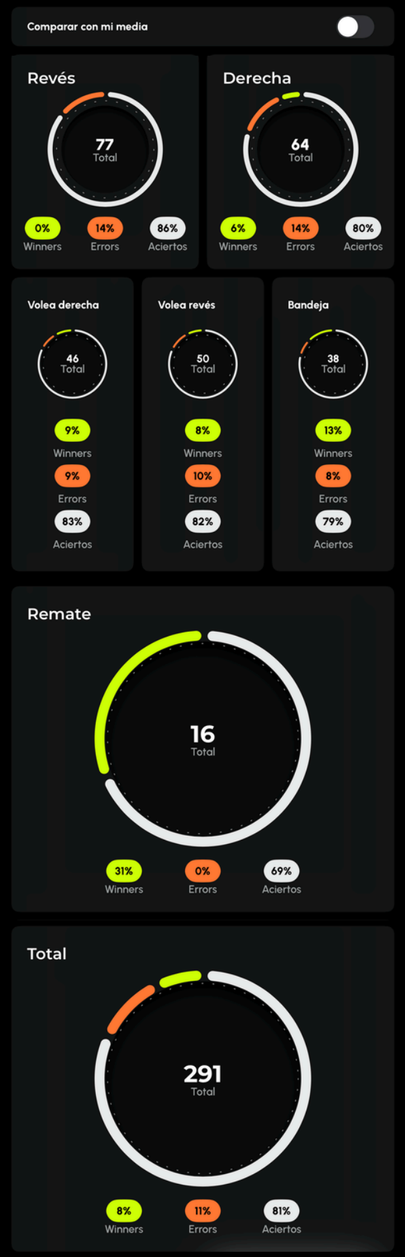

As soon as the match ends.

The Padmi stats

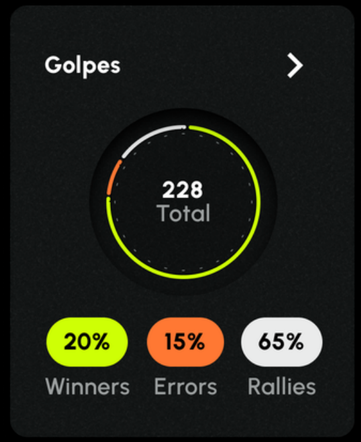

Below you'll find the different **stats and charts** users can see for all their matches in the Padmi app.

Shots

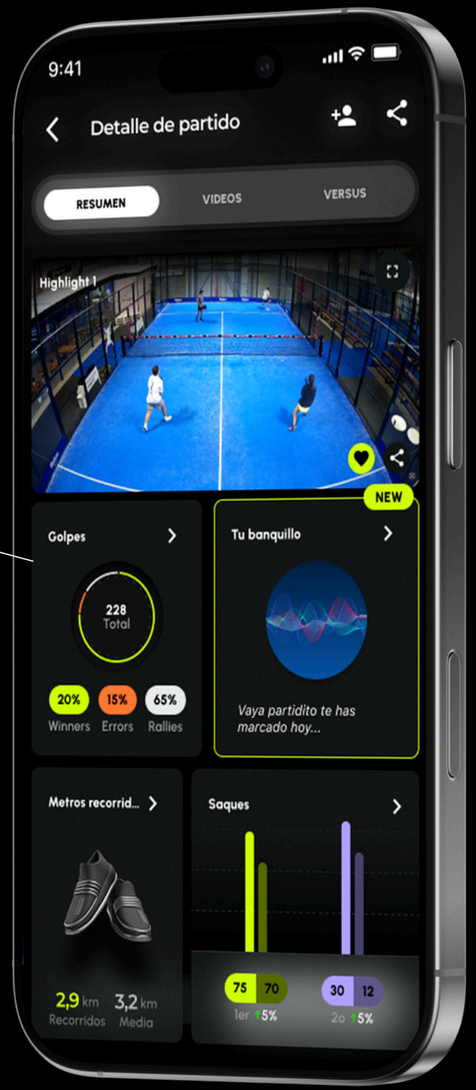

Click to see every type of shot with its percentages and **compare them with your average.**

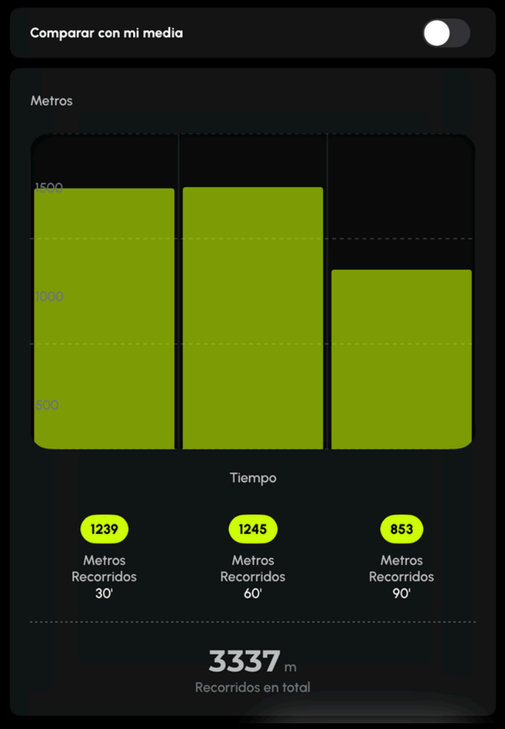

Winners: any ball the opponent doesn't manage to touch

Errors: both forced and unforced

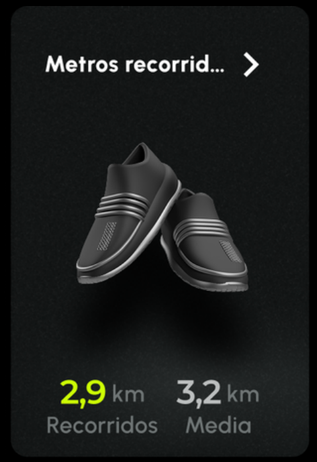

Rallies: every shot that clears the net and lands in the court

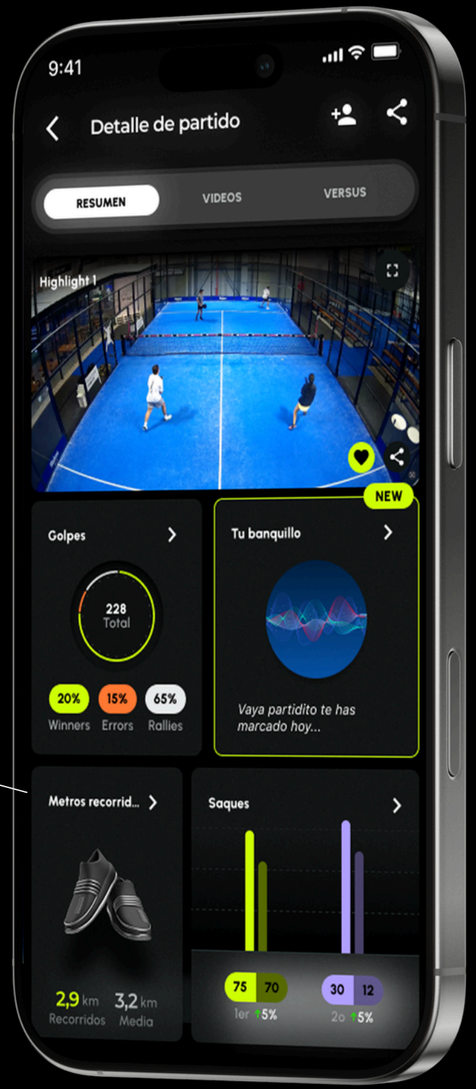

Distance covered

Each bar shows the metres covered in each half hour of the match.

We measure the total metres covered in the match and as an overall average.

Serves

1st serve

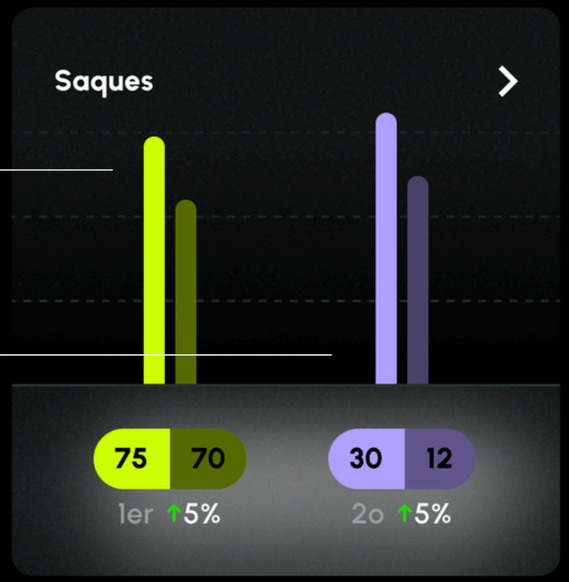

Your serve average

Number of serves in the match

2nd serve

Your serve average

Number of serves in the match

All serves (first and second) analysed and compared with your average.

Speeds

You can compare your speeds with your all-time record.

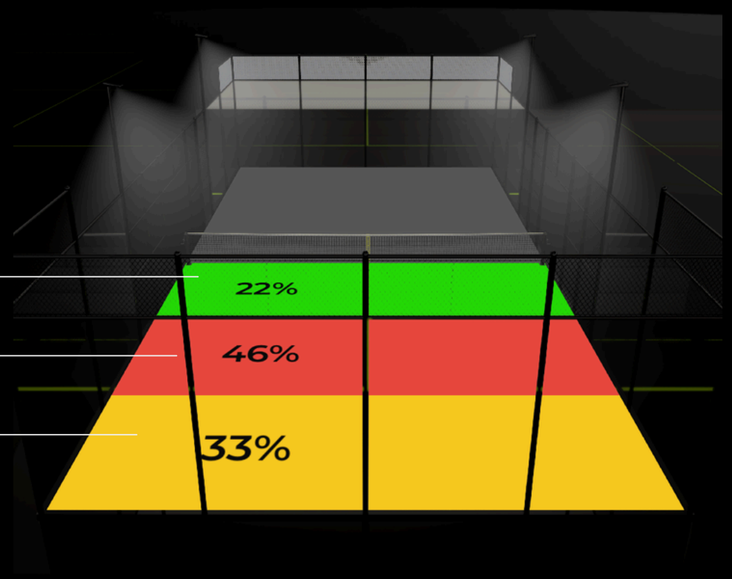

Top speed reached with that type of shot in the match.

Average speed with that type of shot in the match.

Position

Where you spent the most time

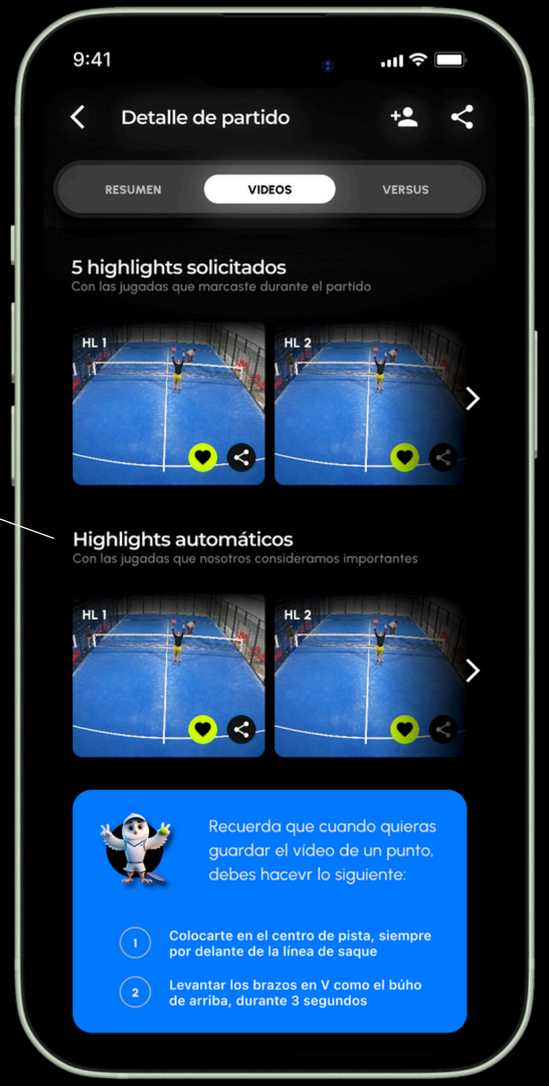

Where you spent the second most time

Where you spent the least time

Padmi highlights

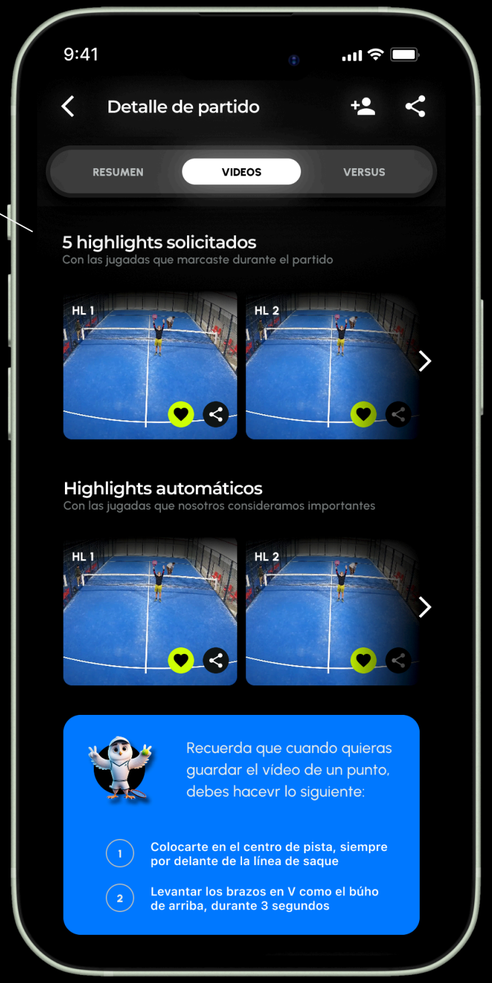

Padmi automatically generates **4 highlights** during the match, plus any others the user requests with the “highlights” gesture.

After the match, all those videos are available in the app, where you can easily watch, save and share them.

Request your highlight

As well as the automatic highlights, if there's a point you want to be sure to keep, you can request a highlight on the spot.

Position

Stand in front of the service line

Arms raised

Raise your arms high in a V

3 seconds

Keep your arms raised for 3 seconds

Pad ID

winners, errors and rallies

serves

distance covered

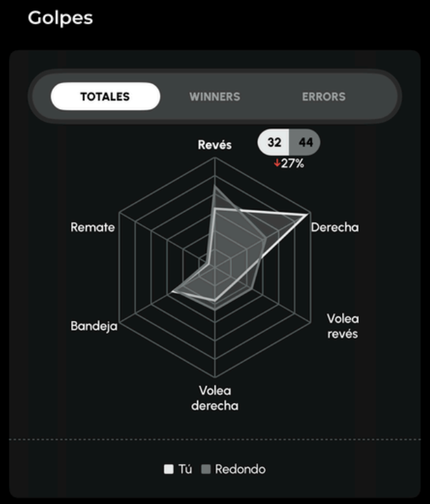

ball speed

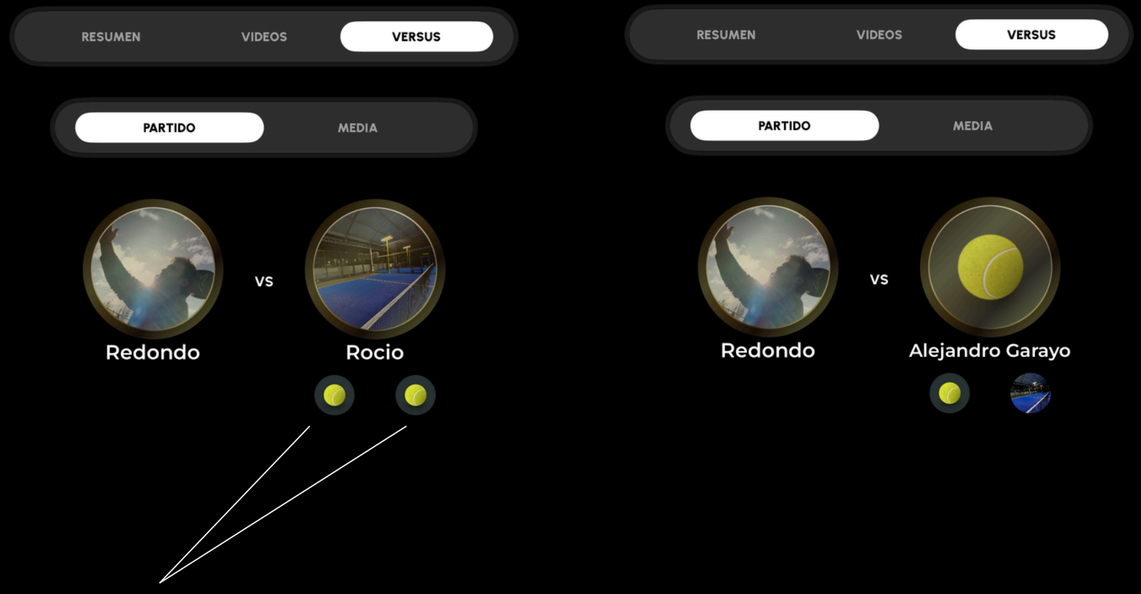

Your player card with the average stats of **all your matches combined.**

Versus

You can compare each type of shot (totals, winners and errors) with each of the other three players.

To change the player you're comparing yourself with, click on their photo (below the photo of the player currently being compared).

Section where you can compare yourself **with the other three players** you played the match with.

FAQ

- **Do all 4 players need to have the app?**

  No. Padmi can be used as long as at least 1 of the 4 players creates the match. Each player will get their stats and requested video highlights, and can invite the remaining players to join the match.

- **Does the person who created the match have to invite me? What if we don't know each other?**

  No need. If 2 players create a match at the same club, court and time, the app will ask whether you want to join the match that has already been created.

- **Can I stream with the cameras?**

  Yes. Using any streaming platform (OBS, Streamlabs...) you can enter the cameras' link to stream matches or tournaments.

- **Does it work for tournaments?**

  Padmi Matches isn't optimised for tournaments. But it can be used as long as the matches last at least 20 minutes, bearing in mind that someone has to be in charge of creating and ending each match as they're played, and that players must join the matches.

- **Can I join the match later?**

  Yes, as long as 1 of the players has created the match beforehand, so that the cameras start recording and analysing correctly.

- **How does it know it's me?**

  The algorithm identifies 4 players throughout the whole match and collects their stats and videos, even if they take off their sweatshirt or change clothes in any way. At the end of the match, the app will show you 4 photos of the 4 players and you'll need to say which one is you.

- **Who can I contact to solve a problem?**
